## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to because the boxes in the block diagram should have brief descriptive labels instead of just numerals. See 37 CFR § 1.84(o). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-13 are rejected under 35 U.S.C. 102(e) as being anticipated by Ishida et al (US # 6,759,604). Ishida disclose the claimed method including a force sensor arrangement (10) independent of the impact sensor arrangement (41-43), measuring the force (Col. 3, line 60 to col. 4, line 4), comparing the measurement with a predetermined value (Col. 4, lines 45-64), and outputting a warning signal if the predetermined value is exceeded (Col. 4, ln. 65 to col. 5, ln. 11). With regards to claims 2 & 3, the crash sensors (41-43) are considered to be the “another sensor” and the “second [independent] warning” is considered to be the impact signal indicating a collision. With regards to claims 4 & 11, Ishida seems to suggest using a conventional dashboard light or buzzer as a warning (Col. 5, line 65 to col. 6, ln. 20). With respect to claims 5, 9, 12 & 13, Ishida discloses using a conventional computerized diagnostic device which would inherently contain in a “fault” memory, information of how to interpret the warning message and to output a sound or a text warning (Col. 4, ln. 45 to col. 5, ln. 11).
